

This webcast is sponsored by

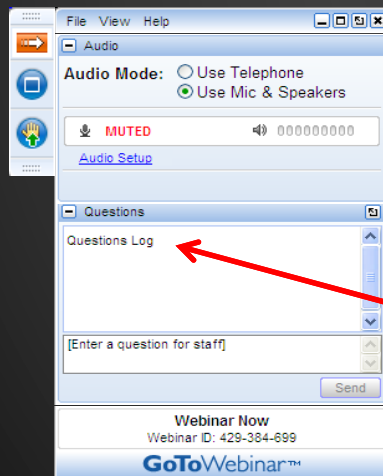

Optimize your PACP Deliverables

April 19, 2017
1:00 - 3:00 pm Eastern

How to Participate Today

- Audio Modes
 - Listen using Mic & Speakers
 - Or, select "Use Telephone" and dial the conference (please remember long distance phone charges apply).
- Submit your questions using the Questions pane.
- A recording will be available for replay shortly after this webcast.

Today's Moderator

Ted DeBoda, P.E.,
Executive Director,
NASSCO, Inc.

Today's Speakers

Mike Russin
Business
Manager
WinCan LLC.

Michelle D.
Beason, PE
Regional
Manager

GISP
GIS Manager
Wright-Pierce

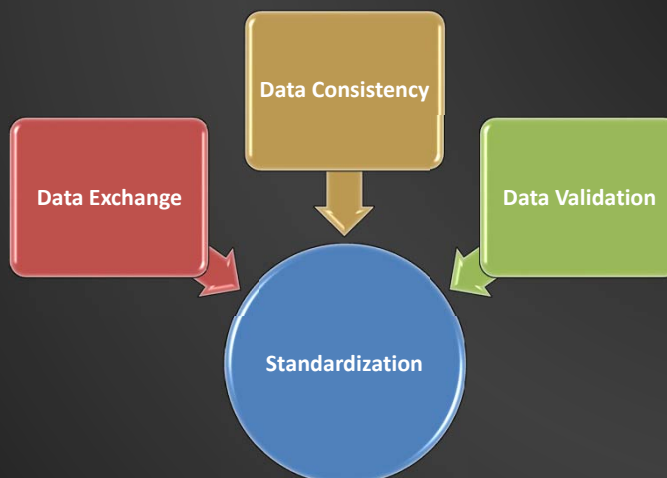

Data Collection and Deliverables: *From a Software Vendors Perspective*

Mike Russin
Business Manager
WinCan LLC.

Why is Standardization Important?

What, How, and Why: The PACP Exchange Database

What?

- What is it?
 - Microsoft Access Database
- What does it do?
 - Stores all the metadata from PACP, MACP, and LACP Inspections

How?

- How valuable is it?
 - Extremely, as it hold all your current and historical inspection data that includes observation and overall quick score ratings that is valuable to condition assessment.(PACP, MACP, and LACP Version 7)

Why?

- Why do we use it?
 - Universal Format (Microsoft)
 - Compatible with all Certified PACP Software's

What, How, and Why: The PACP Exchange Database Cont.

The screenshot shows the Microsoft Access interface. On the left is the 'All Access Objects' pane with a tree view of tables. The main window displays a table named 'PACP_Versions' with the following data:

Version	Date	Notes	Software/Vendor	Software/Pr	Software/Ver	Click to A
6.0.0	11/31/2010	Set version to 6.0.0 and linked Valid_GPS_Accuracy to Inspections and LACP_Inspections	NASSCO	PACP/LACP	6.0.0	
6.0.1	3/7/2011	Changed DH description to not include Brick	NASSCO	PACP/LACP	6.0.1	
6.0.2	3/29/2012	Increased size of field PACP_Code in LACP_Conditions to 6 from 5 to accommodate the length NASSCO	NASSCO	PACP/LACP	6.0.2	

Below this table, there are sections for 'Conditions' and 'Inspections' with their respective table structures. The 'Inspections' table has columns: InspectionID, Surveyed_By, Certificate_Num, Own, Custom, Drainage_A, PO_Num, Pipe_Segment_Refer, Date, Time, Street, City.

Version 7.0 Note: Version 7.0 NASSCO PACP Software Certification requires that the certified software must calculate scores correctly in order to be certified. How the software displays the score is up to each software vendor.

Version 6.0 Note: Version 6.0 NASSCO PACP Software Certification does not certify specific scoring reports nor does it verify the accuracy of any PACP scoring reports which may or may not be provided from individual certified software companies.

The following software has been certified by NASSCO:

<https://www.nassco.org/certified-software>

Things To Consider: PACP Exchange Database

1. All PACP certified software packages will export and import to other PACP certified software packages
2. Difference between native database files and the standard PACP exchange database.
3. Make sure your version of PACP is current and matches your specifications.

NASSCO Certified Specifications & Deliverables

1. Stronger the spec, the better the project. **(Must Enforce!!)**
2. Need to specify NASSCO PACP, MACP, and LACP format to include the PACP Exchange Database.
3. Insist that all data collection be in PACP, MACP, and LACP format according to the NASSCO Standard.

Remember, PACP allows up to 10 customer data fields in the header to accommodate any special needs you might have pertaining to the data collection.

Tips and Tools: What's Available?

- NASSCO website (CCTV specs & database validation tool)
 - General CCTV Specifications (**Under Revision**)
 - Database validation tools
 - List of available PACP Trainings
 - Current list of certified software vendors
- Talk with the industry
 - Tradeshows
 - Social Media
 - Industry publications (June Edition of Underground Construction Technology Magazine)
- Familiarize yourself with what a PACP database and deliverable.

Data Collection and Deliverables From a Contractors Perspective

Michelle D. Beason, PE,
Regional Manager
National Plant Services, Inc., a
Carylon Company

Data Collection and Deliverables

From a Contractors Perspective

Reasons for TV Inspections

- Maintenance related
- Infiltration/inflow investigation
- Pre- and post-rehabilitation survey
- Pre-acceptance survey
- Routine assessment
- CIP assessment
- Resurvey
- Sewer system evaluation survey
- Conversion of pre-existing video
- Not known

Inspection Technologies

Common Tools

- CCTV
- Lateral Launch/Push Cameras
- Pole Camera
- Manhole Inspections

Advanced Tools

- High Definition CCTV/ 360 Degree Cameras
- Laser
- Sonar
- Acoustical Testing
- Electromagnetic Testing

The Benefits

CCTV Inspections

- Visually determine the pipe condition/activity.
- Using PACP can compare changes to an asset over time.
- Low relative cost and ease of use.

Advanced Tools

- LASER: Measure and quantify pipe shape, size, and corrosion levels.
- ELECTROMAGNETIC: Measure thickness of the pipe walls and rebar spacing; voids behind pipe
- SONAR: Measure debris levels under the water

The 3 Phases of Data Collection and Deliverables

- Project Planning
- Project Deployment
- Project Delivery

Project Planning

To begin Immediately on contract ratification

- Obtain Excel List of pipelines to be inspected.
- Obtain maps of pipelines and manholes
- Obtain GIS Shape or Geodatabase Files
- Determine permit requirements (City, County, railroad, State, etc).
- Prepare a project schedule estimating footage to inspect each day, and organize deployments

INSPECTION TECHNOLOGY	PIPE ID	US MH	DS MH	MAP LENGTH	MAPPED DIAMETER	Mapped Material
Sonar/TV	11	B03-049	B03-046	484.46	42	VCP
Sonar/TV	14	B03-053	B03-064	405.08	33	RCP
Sonar/TV	16	B03-060	B03-039	605.44	42	VCP

Project Deployment

- Follow NASSCO CCTV Inspection Protocols
 - Ensure camera is in focus
 - Camera is in center of pipe
 - No debris on the lens
 - Proceed no faster than 30 feet per minute
 - Use Optional Fields to make data more complete
- Keep to project schedule by making sure daily production goals are met.
 - Keep Client informed of progress
 - Prepare Field Log to track all inspection progress
 - Inspection Completion date, actual diameter, actual material, inspected length, comments.

Fuzzy Image?
Not acceptable!

The Field Log

DATE INSPECTED	FROM	TO	Map LENGTH	INSPECTED LENGTH (FT)	MAPPED DIAMETER	ACTUAL DIAMETER (INCH)	Mapped Material	ACTUAL MATERIAL	SENSORS USED	Notes

7-Jan	C06-015	C06-026	295.562	294.2	36	36	VCP	RCP	CCTV Only	

Keeping a complete field log during inspection operations will make it easier to QA/QC later!!

QA/QC and Project Delivery

1. Export PACP Project Summary Report for Project
2. Compare PACP Project Summary to the field log spreadsheet.

QA/QC the Following :

- Pipe ID Numbers
- US and DS Manhole numbers
- Pipe Size
- Pipe Material.

QA/QC and Project Delivery (Cont.)

3. Export the PACP Scoring Report for Project.
4. Select all lines with 4 and 5 Quick Scores, or 10% of inspections with highest score, whichever is the largest number of segments, and QA/QC.

- Pay attention to the following:
 - Header information
 - Ensure defects are coded correctly
 - Correct errors and save record

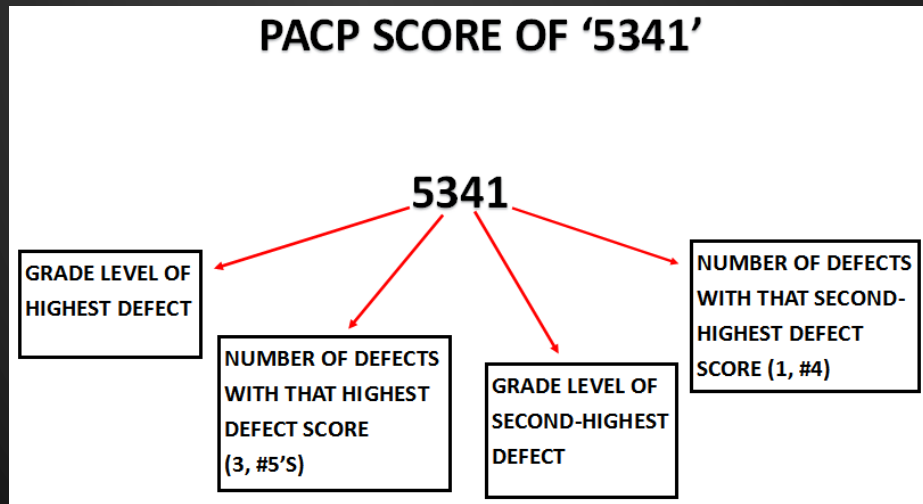

PACP Quick Scores Provide the Most Information about Defects

Optimizing Your PACP Deliverables: *From a Municipal Perspective*

Keith Carpenter, PE – PACP Trainer
City of Lynchburg, VA
Collection Systems Manager

Inspection Strategies

- Understand your system and know what your inspection capabilities and needs
- Type of inspections that need to be conducted and when to do them
- Understand what needs to be inspected per the NASSCO PACP/MACP/LACP standard and what may not
- If lines are pre-cleaned, be mindful how pre-cleaning impacts your results
- Utilizing optional fields in the Header portion of each inspection
- Setting minimum experience requirements for inspection surveyors
- Requiring all digital deliverables (with exception of a sketch and invoice)
- Determining the shelf life of your PACP/MACP/LACP data
- When to require new PACP/MACP/LACP inspections
- Always specify inspections are to be done in the version of PACP/MACP/LACP

Deliverables

1. Preliminary Submittals
2. Intermediate Submittals
3. Final Submittals
4. Submittals to Consider

Preliminary Submittals

- PACP certifications & qualifications from surveyors
- A sample standard NASSCO PACP Standard Exchange Database exported from the Contractor's certified data collection software.
- Example media files (picture stills and video files) generated from the Contractor's certified collection software
- A list of references and past projects detailing the contractor's work history

PROJECT NAME AND LOCATION	Type	CONTRACT AMT	COMPLETION
Market Cross - W. Hillsborough, MI	Multi Family	405,133	Dec-07
Center of Stone Village, MI	Multi Family	400,000	March-08
Aurbon Cove - Columbus, MI	Multi Family	5,804,970	Dec-10
Williamsburg Landing, Martin, TN	Multi Family	852,587	Nov-10
Conover Gardens, Covington, AL	Multi Family	806,498	Mar-11
Woodland Gardens, Humble, TX	Multi Family	1,403,710	Jan-11
St. Albans Gardens, Lafayette, LA	Multi Family	957,963	Jan-11
Greenleaf Properties I, Columbus, MI	Multi Family	404,268	Aug-11
Greenleaf Village, Covington, LA	Multi Family	5,000,000	Jan-12
Stone Estates, Laurel, MS	Multi Family	489,573	Aug-11
Herndon Townhomes-Chattanooga, TN	Multi Family	81,760	Aug-11
The Pines at 6000, Chattanooga, MS	Multi Family	1,700,000	Apr-12
Taylor Bend Apartments-Orlando, MI	Multi Family	500,400	Jan-12
Central Park-Columbus, MI	Multi	1,100,000	Apr-12
Water Village-Columbus, GA	Multi Family	646,473	Jan-12
500 Cross-Columbus, MI	Multi	200,000	Jan-12
Greenwater Place in Jackson, TN	Multi	200,000	Mar-12

Preliminary Submittals (Cont.)

- An equipment list detailing all of the contractor's resources
- A validation report from NASSCO attesting that the sample PACP database is a valid PACP/LACP/MACP database and fully conforms to NASSCO PACP/LACP/MACP standards and conventions.

List of Proposed Inspection Equipment	
1. CCTV and Camera Cleaning Equipment	
•	2009 Vac Con Cleaning Combination Unit
•	2008 Vac Con Cleaning Combination Unit
•	2007 Vac Con Cleaning Combination Unit
•	2006 Vac Con Cleaning Combination Unit
•	2015 Vac Con Cleaning Combination Unit
•	2011 Instra - Cams CCTV Sensor Inspection Truck
•	2012 Instra - Cams CCTV Lateral Inspection Truck
•	2004 Chevrolet - Cams CCTV Inspection Truck
•	2008 Ford - Cams CCTV Lateral Inspection Truck
•	2005 Freightliner - Cams CCTV Inspection Truck
•	Self-propelled lateral inspection/cleaner system
•	PAE remote mobile camera
•	VOX camera Base Station
•	Psychromatic Emission Machine
•	Palisto with R/O/W, K2 Video Inspection Base Station
2. Pick up Trucks:	
•	(3) 2008 Ford F-250 Pick Up Trucks

Database Validation Results			
Client: John Doe	Vendor: XXX		
Email:	Software: ZZZZ		
Phone:	Version: 1.8.00		
Database: C:\Users\John\Documents\20170124_Reports\PACP\exchange_pacp.mdb			
NASSCO DB:	PACP	DB Version: 8.0.2	Date: 1/24/2014
Name:		Valid:	0/0/0

Intermediate Submittals

- A single standard PACP database generated from the Contractor's certified data collection software for all requested inspections or for a specified time period.
- Media files (picture stills and video files) for all requested inspections or for a specified time period.
- Daily activity logs: Daily activity logs shall be submitted to the owner on a weekly basis.
- Major defects: All major defects requiring immediate attention shall be reported immediately to the Owner.
- Mapping discrepancies: All mapping discrepancies shall be reported the owner the same day they are found.
- A single hard drive or a designated cloud storage utility containing all intermediate submittals

Final Submittals

- All Media files (picture stills and video files) for the entire project in that correspond to the specified naming convention.
- All Daily activity logs
- A sketch or map of all inspected line segments clearly showing and labeling all manholes, streets, and distances surveyed of each line segment

The image shows a screenshot of a file explorer window displaying a list of files. The files are organized into columns for Name, Date modified, Type, and Size. Below the file list is a technical drawing or map of a sewer line inspection. The map includes a legend with labels for 'DIRECTION OF INSPECTION' (indicated by a blue arrow) and 'DIRECTION OF FLOW' (indicated by a red arrow). The map also shows various line segments, manholes, and street names, with distances surveyed for each line segment.

Final Submittals (Cont.)

- A single standard PACP exchange database in the latest PACP version generated for the entire project or work order
- NASSCO PACP validation report for the consolidated database
- A single hard drive or designated cloud storage utility containing all submitted data – NO DVD's or CD'S.

Submittals to Consider

- A spreadsheet which calls out the features and length televised of each line segment/inspection that corresponds to your invoice
- If cleaning was done, a report that breaks down the type of cleaning done, lengths cleaned, and the debris encountered
- A proprietary database as generated by the Contractor's data collection software.
- Free-issue software to view proprietary inspections and training on how to use it
- Pdf inspection reports generated from the Contractor's software

Quality Assurance & Quality Control

- Check make sure all the PACP header information fields, facility id's, media file names, and media formats are correct and have been utilized correctly.
- Make sure that the Contractor has coded things correctly
- Make sure that each inspection is complete
- Make sure that the catalogued defects sync up with the correct position in the video
- Make sure that video quality is satisfactory
- Keep in mind that the contractor is only obligated to meet the requirements of the specifications.

A Real-Life Application for Using Data with GIS for Risk Management

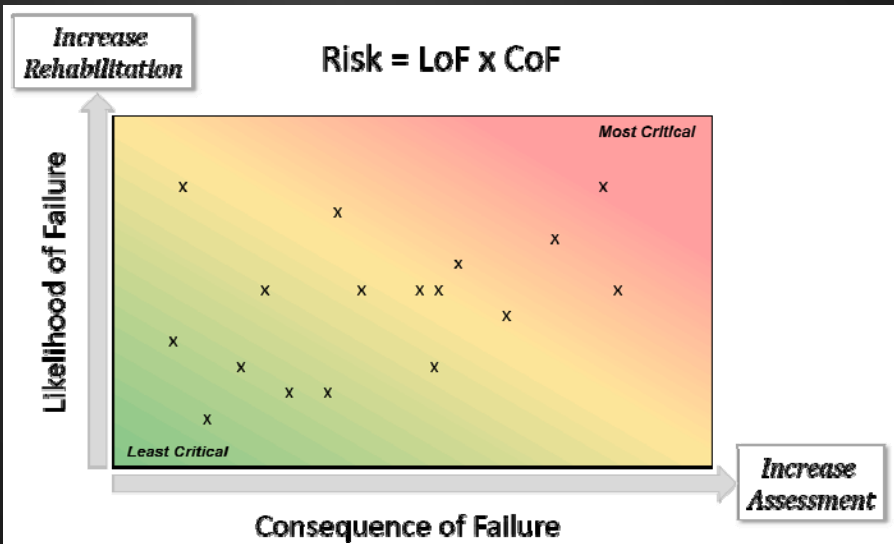

Laurie Perkins, PE
Senior Associate, PACP Trainer

Jeff Normandin, GISP
GIS Manager

Risk in Asset Management

Risk in Asset Management

Likelihood of Failure (LoF)

- Based on Asset's Physical Condition
- Determined through inspections

Consequence of Failure (CoF)

- Based on Direct & Indirect Impacts of a failure

Risk in Asset Management

Why GIS?

- Geographic analysis - Not just assets, What is NEAR your assets
- Better visual understanding
- Iterative Process
- Dynamic Results

Consequence of Failure

Social Costs

- Recreation areas
- Critical customers (hospitals, etc)

Economic Costs

- Pipe diameter
- Pipe depth
- Road classification

Environmental Costs

- Proximity to surface water, wetlands, floodplains
- Known presence of endangered species
- Significant Natural Communities

CoF Factors

Tabular Classification

Pipe Diameter

- ≤ 6"
- 8"
- 10-12"
- 15-20"
- 21-24" (Round, Oval, and Box)
- 30-108" (Round, Oval, and Box)

CoF Factors

Geographic
Calculation

Endangered
Species

CoF Factors

Geographic &
Tabular Calculation

Pipe Depth

Manholes with
Invert Elevs (M)

Pipes with
Invert Elevs (ft)

Surface Elevations
(LiDAR)

CoF Factors

Additional Consequence of Failure Considerations:

- Bike & Pedestrian Path - Treated as a Major Road
- Storm Drains and Outfalls - Treated as Streams

Weighted Prioritization

Social Costs

- Recreation areas
- Critical customers (hospitals, etc)

Economic Costs

- Pipe diameter
- Pipe depth
- Road classification

Environmental Costs

- Proximity to surface water, wetlands, floodplains
- Known presence of endangered species
- Significant Natural Communities

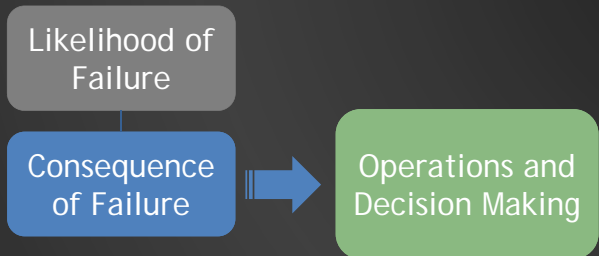

Overall Weights for Aggregation

Water	28.00%	Recreation Areas	7.50%
Pipe Diameter	16.67%	Critical Customers	7.50%
Pipe Depth	16.67%	Endangered Species	3.50%
Road Class	16.67%	Sig. Nat. Coms.	3.50%

Combined CoF Score

Score_Social	Score_Economic	Score_Environmental	Criticality
0.579256	0.555556	0.70122	2.374856
0.645426	0.388889	0.68945	2.426905
0.60283	0.555556	0.697275	2.89497
0.590455	0.555556	0.695506	2.891245
0.697369	0.444444	0.610067	2.590308
0.269283	0.888889	0.988634	5.001861
0.265989	0.722222	0.932151	4.218312

0.269544	0.555556	0.86672	3.43529
0.343282	0.388889	0.97756	3.561483
0.395649	0.555556	0.97193	4.105067
0.300536	0.388889	0.980988	3.525121
0.445459	0.777778	0.577641	4.82016
0.564182	0.611111	0.97785	4.427142
0.504537	0.611111	0.981737	4.37591
0.395649	0.444444	0.981372	3.777682
0.453617	0.555556	0.699634	2.756911
0.398176	0.555556	0.695264	2.708041
0.299094	0.666667	0.994601	4.365784
0.367569	0.666667	0.995388	4.427006
0.441151	0.388889	0.600007	2.939447

Additional factors for prioritization:

- Break History
- Capital Improvement Projects
- Capacity Issues

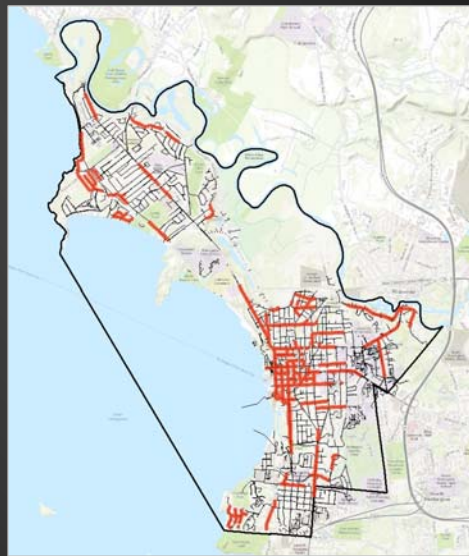

Other Considerations

Problem Areas

Results

Final Selection:
Pipes To Be Inspected
as First Priority

Results

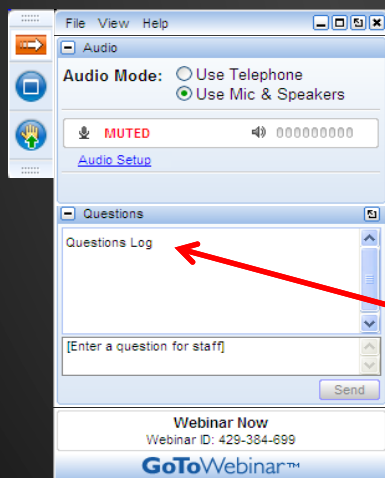

Results of Analysis Guide Inspections

- Prioritization Easily Revised or Updated
- Combine with Results of PACP Inspections (LoF) For total Risk Assessment Score

Questions? How to Participate:

- Audio Modes
 - Listen using Mic & Speakers
 - Or, select "Use Telephone" and dial the conference (please remember long distance phone charges apply).
- Submit your questions using the Questions pane.
- A recording will be available for replay shortly after this webcast.
